

IBF is disruptive technology that dramatically improves ESI and MALDI.

IBF morphs syringes, pipettes, pumps, chips, SPE, etc. into powerful nL/uL/pL non-touch dispensers.

IBF a revolutionary MS, syringe, pipette, chip, SPE technology with unique attributes + great economics.

Don't be left behind! Consider licensing US, international rights/positions for....

\*the nanoLiter, microliter syringe,

\*the nanoLiter, microliter pipette and/or the IBF walkup pipette/MS,

\*the nanoliter, microliter chip,

\*the highly multiplexed IBF LC/MS for clinical and other really rapid chemistry applications,

\*the IBF ESI/LC/MS/MS, LC/MALDI and IMS variants including FIA MS.

or

\*for non-touch parallel dispensing to/from YOUR robotic platforms, LO 3D printing, gluing, manufacturing.
